Compact FieldPoint Real-Time Ethernet Controller Interfaces

Overview and Applications
Compact FieldPoint is a programmable automation controller (PAC) designed for industrial control applications performing advanced embedded control, data logging, headless operation, and Ethernet connectivity. It combines the packaging, specifications, and reliability of a PLC with the software, flexibility, connectivity, and functionality of a PC. Compact FieldPoint is our most rugged and reliable platform and is designed for industrial and mobile environments with high shock, vibration, and temperature extremes. Compact FieldPoint banks run LabVIEW Real-Time, providing the functionality, connectivity, and flexibility of LabVIEW on a small, rugged, industrial platform. The modular I/O architecture with built-in signal conditioning and isolation provides direct connectivity to industrial sensors such as analog voltage, 4 to 20 mA current, thermocouple, RTD, pressure, strain, flow, pulse width modulation (PWM), and 24 V digital I/O.

System Configurations
A single NI cFP-20xx controller manages a bank of up to eight Compact FieldPoint analog and digital I/O modules, which constitutes a node. The network module securely mounts on a metal backplane that provides a solid mounting surface for the Compact FieldPoint bank and forms the communication bus between the controller module and the I/O modules. You choose the I/O modules and connector block or cabling option that is best suited for your application.

For more details on configuring a Compact FieldPoint system, see page 517.

Highly Productive Software
When your application requires powerful functionality and rapid development, the key is flexible software that integrates seamlessly with hardware. LabVIEW is an industry-standard graphical development environment that provides all the tools necessary to create advanced and full-featured measurement and control applications. LabVIEW makes it easy to construct simple or complex applications using an extensive palette of functions and tools - from simple analog PID process control loops to high-channel-count hybrid control systems that combine both analog and digital components.
LabVIEW Real-Time Controller Interfaces with Ethernet

Embedded Control Made Easy
LabVIEW Real-Time enables you to perform digital and analog control on the FieldPoint platform. With LabVIEW Real-Time embedded and running on a cFP-20xx controller, you can perform simple digital control with Boolean logic, as well as more advanced analog control, such as PID and fuzzy logic. The PID Control Toolset for LabVIEW has drop-down boxes for basic and advanced PID, feed forward, and fuzzy control. You can also use it for linear and nonlinear testing, modeling, and simulation. When developing a control system, you can take advantage of LabVIEW to implement basic control or easily incorporate advanced control techniques, such as disturbance decoupling, gain scheduling, and fuzzy logic control. For beginner users, powerful tools such as Autotuning PID make life easier and more productive. For embedded systems, you can effortlessly deploy your LabVIEW application on the real-time Compact FieldPoint hardware target.

Web-Enabled Hardware
With remote panels, you can use a Web browser to connect to the front panel user interface for your LabVIEW application. Several Web browser clients can simultaneously view the front panel, while a single browser can both view and control the application. cFP-20xx real-time controllers feature an embedded Web server that handles up to 20 simultaneous remote panel connections. The cFP-20xx controllers also offer static Web pages to display system information and automatically run an FTP server to make it easy to update the embedded control program or to share logged data.

Embedded Intelligent Data Logging
Compact FieldPoint 20xx controllers all feature built-in nonvolatile memory for data logging, and with the cFP-2020 you can expand your storage capacity by using the removable CompactFlash drive. You can store the data in any DOS-compatible format, including CSV and XML. Once the data is stored, you can easily transfer it to a PC using the embedded FTP server on the cFP-20xx. LabVIEW Real-Time expands the functionality beyond the typical data logger because you can make additional calculations and decisions to eliminate logging unneeded data and to perform onboard real-time processing and control. Compact FieldPoint combines data logging, data reduction, control algorithms, HMI, and the ability to communicate with other nodes on the network.

Communication
cFP-20xx controllers connect directly to Ethernet and autonegotiate on the network for 10 M b/s or 100 M b/s communication rates. The Ethernet port serves as a high-speed link for downloading application code, performing run-time debugging and probing, and transmitting control and indicator values with a graphical user interface (GUI) running on a networked PC. You can also use the Ethernet port for programmatic network communication using protocols such as TCP, UDP, FTP, HTTP, and DataSocket.

Once deployed, the controllers can communicate peer to peer with other cFP-20xx intelligent FieldPoint controllers, or with passive network interfaces such as the FP-1601 and FP-1000. In addition, cFP-20xx controllers can communicate to a Windows computer running LabVIEW, Measurement Studio, Lookout, or your choice of National Instruments or third-party OLE for process control (OPC) client application software. Using industry-standard OPC technology, the Compact FieldPoint controller automatically communicates with the FieldPoint OPC server over the network to read and write I/O remotely without programming. This feature makes it easy to communicate with Compact FieldPoint using any OPC-enabled HMI/SCADA supervisory control software and to add Compact FieldPoint to installations with existing hardware.
Decrease Network Traffic with Event-Driven Ethernet Communication

Using an event-driven communication protocol, the cFP-20xx transmits data via Ethernet only when data values change. This eliminates unnecessary network traffic, resulting in more efficient communication. The data values can consist of individual I/O module channels or user-defined variables in the embedded LabVIEW program.

Serial Connectivity

cFP-20xx controllers also include up to three RS-232 serial ports and one RS-485 serial port to programmatically communicate with other serial devices such as remote FieldPoint banks, LCD display/keypad units, bar code readers, or phone and radio modems.

Security

With the advanced security features enabled, only authorized clients can access the Compact FieldPoint system. Authorized clients are Ethernet nodes with IP addresses that match user-defined patterns. You can also further qualify the list of clients by their access rights—none, read only, and read/write (with access to configuration). Initially, the network module grants all clients full access. The user then can select an IP pattern that corresponds to the required list of clients. In addition, you can set a password that any user can enter for full access rights to the Compact FieldPoint System.

Power Supply Backup and Regulation

An 11 to 30 VDC supply powers the cFP-20xx. An extra set of screw terminals is available on the network controllers for a backup UPS or battery. The controllers filter and regulate the power input, redistributing power to all the I/O modules in the node via the backplane bus. For external power supply options, see Compact FieldPoint Accessories on page 526.

Easy Configuration Software

National Instruments Measurement & Automation Explorer (MAX) configuration software, included with your Compact FieldPoint hardware, simplifies the use and integration of Compact FieldPoint systems. With MAX, you configure the entire system, including network parameters, module and I/O settings, and named-channel items. MAX will search your Ethernet network and return configuration settings on all your Compact FieldPoint nodes. MAX will also automatically detect the I/O modules on each bank, and you can easily configure I/O parameters, such as input ranges, power-up output states, and watchdog states, using intuitive dialog windows. To get your system up and running quickly, from MAX you can also interactively test I/O modules and channels, viewing input data values, and setting output values without writing any software code.

In addition to configuring hardware parameters, MAX also configures and manages named-channel items used in your higher-level programming software. From your application software package, such as LabVIEW, LabWindows/CVI, Measurement Studio, or Lookout, you simply address a named-channel item to access the I/O values.

For more details on configuring a Compact FieldPoint system, see page 517.

LabVIEW Real-Time Controller Interfaces with Ethernet

Specifications

**Network**
- Network interface: 10BaseT and 100BaseTX Ethernet
- Communication rates: 10 Mbps, 100 Mbps, autonegotiated
- Maximum cabling distance: 100 m/segment
- Maximum power to connected I/O modules: 9 W
- Maximum number of banks: Determined by network topology

**Memory**
- cFP-2000: 32 MB nonvolatile; 16 MB DRAM
- cFP-2010: 64 MB nonvolatile; 32 MB DRAM
- cFP-2020: 64 MB nonvolatile; 32 MB DRAM

For more information about the memory used by the LabVIEW RT module and the operating system, go to ni.com/info and enter infpec.

**Serial Ports**
- cFP-2000: One RS-232, DTE
- cFP-2010: Two RS-232, DTE
- cFP-2020: Three RS-232, DTE; one RS-485, DTE

**RS-485 Isolation Voltage**
- cFP-2020: 100 Vrms
- cFP-2010: 100 Vrms

**Power Requirement**
- Power supply range: 11 to 30 VDC
- Recommended power supply: PS-5
- cFP-BP-4 system: 15 W
- cFP-BP-8 system: 20 W
- Power consumption:
  - cFP-2000: 4.8 W + 1.1 (I/O module power requirements)
  - cFP-2010: 5.0 W + 1.1 (I/O module power requirements)
  - cFP-2020: 6.1 W + 1.1 (I/O module power requirements)

**Environmental**
- FieldPoint modules are intended for indoor use only. For outdoor use, they must be installed in a suitable sealed enclosure.
- Operating temperature: -25 to 60 °C
- Storage temperature: -55 to 85 °C
- Relative humidity: 10 to 90%, noncondensing
- Maximum altitude: 2,000 m; at higher altitudes the isolation voltage ratings must be lowered
- Pollution Degree: 2

**Shock and Vibration**
- Operating vibration:
  - Random (IEC 60068-2-64): 10-500 Hz, 5 g rms
  - Sinusoidal (IEC 60068-2-6): 10-500 Hz, 5 g
- Operating shock (IEC 60068-2-27):
  - 50 g, 3 ms half sine, 18 shocks at 6 orientations
  - 30 g, 11 ms half sine, 18 shocks at 6 orientations

**Shock and Vibration Specifications**

- cFP-BP-8 system: 20 W
- cFP-BP-4 system: 15 W

**Operating shock**
- IEC 60068-2-27:
  - 50 g, 3 ms half sine, 18 shocks at 6 orientations
  - 30 g, 11 ms half sine, 18 shocks at 6 orientations

**Electromagnetic Compatibility**
- CE, C-Tick, and FCC Part 15 (Class A) Compliant
- EN 55011 Class A at 10 m FCC Part 15A above 1 GHz

**CE Compliance**
- This product meets the essential requirements of applicable European Directives, as amended for CE Marking, as follows:
  - Low-Voltage Directive (safety) 73/23/EEC
  - Electromagnetic Compatibility Directive (EMC) 89/336/EEC

**Safety**
- CE marking, as follows:
  - IEC 61010-1, EN 61010-1
  - UL 3121-1, UL 61010C-1
  - CAN/CSA C22.2 No. 1010.1

**Electrical Characteristics**
- DoC for this product for any additional regulatory compliance information, to obtain the DoC for this product, click Declarations of Conformity on ni.com/hardref.nsf/ and search by model number or product line.
